

## David Hayes Portfolio 1

N8860165

Sadly my portfolio is not very big since I'd never worked in the language we were using (PHP) and spent a lot of my effort points in sprint 1 and 2 learning how to use it.

My five portfolio pieces are.

1. Designing the first draft structure of the database with Archie (Basic SQL Table Code.sql)
2. Implementing the first draft into SQL code so it can be added to the dev environment. (Basic SQL Table Code.sql)
3. Working with our client on their Acceptance Criteria and working on ours also. ( No document)
4. Debugging the jobrequest.php where because of a missing caps in the file tile it was not running at all within the program. (jobRequest.php)
5. Working with the SQL code to check how long since a job had been posted and adding that information into the table. (landing.inc)
